What is Wrong With My Metrics?

# Me Myself and I

I'm about 20!

Olivier Denoo – VP CFTL – VP ps\_testware

What Is This All About?  
My Tester's Midsummer Night's Dreams  
Come Get Some More

# 1. What Is This All About?

# Much Ado About Metrics

- Metrics are:
  - A managers' disease
    - Watch out, it is more contagious than flu!
    - ...and makes many more victims
  - A convenient way to bother those who (really) do the job
- The symptoms – how to detect:
  - I'm the King of the World (Titanic)
    - ...well, of my own little world (The Bromeliad - Pratchett) **ACT**
  - I know EVERYTHING, I know the TRUTH
    - ...even the bits not fit to be told **UNDERSTAND**

# The Higher the Simpler...

- Top Managers' Favorite's

- The Ultimate One

- Even better...

# But First, You Need Some To Start With...

- Will the culprits please rise (names! names!)
  - Which ones have you got?
  - How about the others?

## 2. Tester's Midsummer's Nights Dreams... and Many More Alas!

# Sun – Mon: 1<sup>st</sup> Dream

- How about measuring the number of defects?
- And - how splendid! - evaluate our testers based upon this figure?

# Mo – 1<sup>st</sup> Nightmare

- I've got 1000 defects – Is it good?
  - How important all in all?
  - How many are left?
  - What do you do with them?
- I've got 3 defects – Is it bad?
  - How long did you take to find them?
  - How « old » is the application – From how long do we find some?
- Who's gonna be billionaire: Patrick with 100 useless bugs or Steve with 10 critical ones?
- Defects are like earthworms, when you cut them into parts they multiply!

# Wake Up!

- Number doesn't matter!
- What is better is the enemy of what is good
- Stop confusing: People are NOT their jobs.
- Evil thoughts for the Evil Minded:
  - Just count the solved defects in the evaluation
  - You start a big fight between Testers and Developers – Yipee!

# So, What Are We Talking About?

- Number of defects
    - Severity (impact)
    - Description, details
    - Priority (how urgent)
    - Status
    - Where (function, version...)
    - Probability of occurrence and detection
- 

# Mo–Tu – 2<sup>nd</sup> Dream

- Let's set up individual performance goals?
- How about measuring them?
  - 10 bugs out per person (DEV) and per day
- Promote the best and warn the rest?
  - No arms, no legs, no kisses!

# Tu – 2<sup>nd</sup> Nightmare

- The goal is reached...BUT
  - Not the good but the easy bugs
  - Low hanging fruits
  - 3 times more « returned defects » - not reproducible
    - ...like the tester's workload
  - ...not to say a word about planning
  - It's party time!

# Wake up!

- Number is not enough!
- People are NOT products – let's not confuse.
- A very good atmosphere between Testers and Developers – guaranteed!

# What Are We Talking About?

- Number of fixed defects / unit time
- Number of found defects / unit time

# Tu-We – 3<sup>rd</sup> Dream

- How about measuring Progress?

- ...Oh! And let's infer planning from there?
  - Cool!
- 
- 

# We – 3<sup>rd</sup> Nightmare

- To infinity and beyond
  - Requirement? Test Design? Test Case? Validation Point?...Where is it worth to measure?
  - ...at what cost?
- When 1 is not equal to 1
  - Some are more complex
  - Some are repeated (add, modify, delete)
  - Some contain more or less data
  - Not to say anything about their own quality

$$a = b$$

$$a^2 = ab$$

$$a^2 - b^2 = ab - b^2$$

$$(a+b)(a-b) = b(a-b)$$

$$a+b = b$$

$$\therefore b+b = b$$

$$\therefore 1+1=1$$

$$2=1$$

# Wake Up!

- It is all about Complexity and granulometry
- The same goes for Quality metrics  
(% passed product vs % coverage)
- Progress is neither good nor bad, only the story counts...
- ...and they arrived all together in the end.

# What Are We Talking About?

- % Coverage
  - Design
  - Execution
- Requirement, Test Design, Test Case
- %Coverage / unit time
- Linear or non-linear regression?

# We-Th – 4<sup>th</sup> Dream

- How about « boosting » the team efficiency so as to cope with our top notch « high performance culture »?

# Th – 4<sup>th</sup> Nightmare

- So cool! But what do we reward exactly?
  - Developers, building and then fixing defects?
  - Testers who find them and make sure they are fixed?
- What is the context?
  - Brand new unpolished application or 20 years old system
  - How about techniques, maturity, HR positioning, training,,,?
  - How old is the captain by the way?

# Wake Up!

- Fast is OK, too fast is chaos
- You measure what you control (and vice-versa)
- ...in the end we all cross the line together.

# What Are We Talking About?

- Defect detection rate, efficiency
  - Defect fixing rate, efficiency
  - MTBE, MTBF
  - %Errors in test
  - %Test maintenance
- 

# Th-Fr – 5<sup>th</sup> Dream

- Let's build an ultimate dashboard that is sooo good that competition would love to hate it!!!

# Fr – 5<sup>th</sup> Nightmare

- Brilliant! I want more...and more
  - Big mid-season price today
    - ...weather forecast + fitness program + whosdonewhat + ...
- Supersize me...but go to the slightest detail as well
  - No...all Mercedes Class C, 220D, 5 doors that are licensed in department 59 with an owner living in Ronchin must get this premium...it only applies to the blue ones
- ...until you're lost in space
  - My defect...where is my defect?

# Wake Up!

- Too much info kills the info!
- The more you get, the more you want!  
... victims of their own success
- How much are you ready to pay for this?
- What do you (exactly) get out of there?
- ...can you (really) act upon it?

# What Are We Talking About?

# Testers	Effective	Cum. % planned resources for SP2.3
Execution test designs	5,5	58%
Check printed documents	3	
Ad hoc tests	5	63%

Not active defects	454	47	1507	2008						
			Test exam							

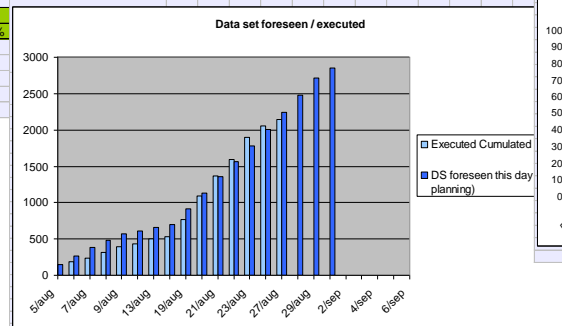

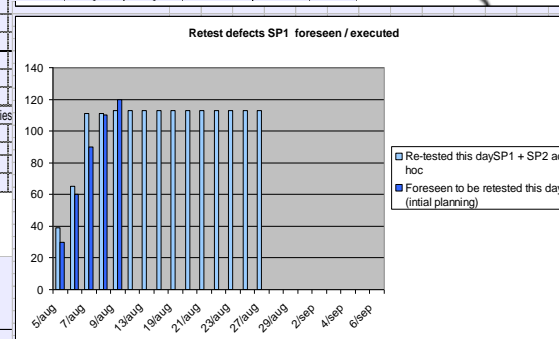

Remarks :

Today :

Finalised retest of fiches linked to "marques-modèles" has been done  
Application has been better regarding response time but a lot of instabilities

Program for tomorrow :

Same as today

# Sa – 6<sup>th</sup> Dream

- How about exploring the unknown lands of quality and discovering strange and exotic estimators?
  - UML for Dummies
  - Test Planning for Dummies

# Sa – 6<sup>th</sup> Nightmare

- *What? Oh technical tests should be in...and automated...and you considered they are part of the deal. Hmmm! Oh and they should also fit with MsOpenJava\_on\_Rail for mainframe... in a virtualized environment, of course, piece of cake!...no, no nothing to change. Anyway the contract is signed, right?*
- *Yes of course we planned two regression test campaigns...for sure...I think Can you remind me what you call like this by the way?*

# Wake Up!

- What do we know for sure?
- What do we master?
- What are the rules and how explicit are they?
- What is under control and what is not?
- What are the expectations and how clear are they?

# What Are We Talking About?

- Test (effort) Estimation
  - Test Planning / Estimation
  - Test Strategy  
(test techniques, test levels, test types...)
  - Iterative approach and estimation
- 
- 

### 3. Want Some More?

# Su – Get A Rest

- Let's learn the lessons of all this?

# What Are We Talking About?

- Test Metrics
  - Are NOT the Truth but in the best case a partial **representation** of it
  - Have no intrinsic value – they are only worth in a given **context**, **compared** with each others or because of their **evolution**
  - Are NOT the goal, They are only means to better **understand** and **act**
  - Don't make **politics**...but have a serious affinity for it
  - Are no better than the story behind them
  - Are **incompatible with people**
- So, should we stop measuring then?

# Wake Up!

- No way folks! It's Sunday
- Stay reasonable and everything will be for the best in the best of all possible worlds

ps\_testware  
Your devil's advocate

Thank You Very Much
